A disposable body fluid absorbent wearing article includes a liquid-pervious topsheet including plastic film

5 layer sections, liquid-pervious openings and a first fibrous layer bonded to the lower surface of the film layer sections.

A second fibrous layer forming a liquid-absorbent core is contiguous to the lower surface of a first fibrous layer and a third fibrous layer is contiguous to the lower surface of the 10 second fibrous layer. The wearing article is constructed so that its Klemm's water absorbency may progressively increase in the order of the first fibrous layer, the second fibrous layer and the third fibrous layer.
